

# File Manager API

## Description

Create a basic API that allows authenticated users to upload to and manage files on the server.

The system must have the following features:

- Email verification upon registration.
- Password reset.
- Supported file types: PDF, PNG, JPEG, DOC, DOCX
- View all/ a specific file(s).
- Download files
- Delete files
- The system must be Dockerized. IE it should have a working docker file and docker compose for building the docker image and running the system.

**Backend Framework:** FastAPI

**Security:** OAuth2

**Database:** MongoDB / Postgres
